DETAILED ACTION

- 1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on December 1, 2003 has been entered.
- 2. Claim 1 is allowed.
- 3. The drawings were received on December 1, 2003. These drawings are acceptable.
- 4. Applicants have amended claim2 such that claims 2-21 are broader in scope than previously examined. The removal of a limitation to contact angle with respect to instant (ii) broadens the scope of plates now claimed.
- 5. The following is a quotation of the first paragraph of 35 U.S.C. 112:
 - The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.
- 6. Claims 2-21 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Applicants in claim 2 under (ii) now claim a vacancy ratio from 20% to 70%, and micropores physically exposed on the surface of the anodic oxidation coating having diameter of not more than 15nm, wherein these values are for the aluminum substrate which has an anodic oxidation coating disposed therein wherein anodic oxidation coating has these properties before

Application/Control Number: 09/826,888

Art Unit: 1752

the recording layer is provided thereon to form the claimed planographic printing plate. This is broader condition than that originally disclosed in the application and claims. Applicants deleted the "and a contact angle of a non-image area of the anodic oxidation coating after a developing proces of not more than 20 ° which as also been required of the (ii) condition. Applicants have not specifically pointed out support for the broader more generic plate now being claimed. Under certain circumstances, omission of a limitation can raise an issue regarding whether the inventor had possession of a broader, more generic invention. Se, e.g., PIN/NIP, Inc. V. Platte Chem. Co., 304 F.3d 1235, 1248 64 USPQ2d 1344, 1353 (Fed. Cir. 2002), Gentry Allery, Inc V. Berkline Corp., 134 F.3d 1473, 45 USPQ2d 1498 (Fed. Cir 1998). In re Sus, 306 F.2d 494.504.134 USPO 301, 309 (CCPA 1962). In the paragraph bridging pages 7-8 of the original specification, applicants made clear that with two separate plates satisfied their present invention. With respect to (ii), the vacancy ratio limitation, the diameter of the micropore limitation and the contact angle limitation were all required to meet their requirements for their invention. Table 3 on page 49 shows in Comparative Example ii-3 a plate which meets the requirements with respect to vacancy ratio and diameter of the micropore but has a contact angle not within the required "not more than 20°". On page 51 of the original specification, applicants reference Comparative examples ii-3 as having inferior anti-staining properties and states in the last full paragraph, "And even though vacancy ratio of the formed coating is in the scope of the present invention in the case that diameter of micropore and contact angle is out of the range of the present invention as in Comparative examples ii-2 and ii-3, anti-staining properties are inferior." Thus, the original specification and claims do not support the generic plate of (ii) condition now

Application/Control Number: 09/826,888

Art Unit: 1752

claimed. Workers of ordinary skill in the art would not have recognized the plate without the contact angle limitation as being part of the invention disclosed.

7. The examiner notes that the other amendments to claim 21 are supported with original disclosure as set forth by applicants in their amendment.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Cynthia Hamilton whose telephone number is 571-272-1331. The examiner can normally be reached on Monday through Friday from 8:30 am to 5:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mark Huff, can be reached on 571-272-1385. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
